

METCALFE COUNTY FISCAL COURT
Harold Stilts, County Judge/Executive

METCALFE COUNTY EMERGENCY MANAGEMENT
Emory Kidd, Director

Press Release **4/1/2020 5:00 pm**

New Information: Currently there have been **680** confirmed cases of Covid-19 in Kentucky. **39** of those cases are in BRADD area. **Fake mobile labs are popping up taking cash only and also stealing your identity. If a mobile testing facility shows up in your area be sure and report it to the authorities. If you suspect something is not correct with the testing facility please call and check before you go to that mobile spot.**

Metcalfe County Covid-19 status: No tests have been conducted in Metcalfe County.

Latest from Barren River District Health: (NEW TODAY)

We ask that every Barren River District resident take initiative by reporting large gatherings and non-compliance by calling the State Reporting Hotline: 1-833-597-2337, BRDHD's COVID-19 Information Line: 270-781-8039, or reporting online at <https://secure.kentucky.gov/formservices/Labor/KYSAFER>. It is crucial that we all continue to practice social distancing and follow guidelines from the state, Governor Andy Beshear, and the CDC. In order to flatten the curve, we must understand how the virus spreads. Here is what we have learned about how the virus spreads so far:

Person-to-person spread

- The virus is thought to spread mainly from person-to-person
- Between people who are in close contact with one another (within about 6 feet)
- Through respiratory droplets produced when an infected person coughs or sneezes
- These droplets can be inhaled into the lungs, or land in the mouths of people nearby
- Although it isn't thought to be the main source of the virus spreading, it is possible that people can spread the virus before they show symptoms
- People who have the virus are thought to be most contagious when they are experiencing symptoms

Contaminated surfaces or objects

- It may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads
